SUMMARY

First Class BSc (Hons) Cyber Security graduate from Nottingham Trent University (2026) with practical experience in network defence, vulnerability assessment, security monitoring, cloud computing, and secure application development. Experienced with Python, Scapy, Wireshark, Nmap, and Burp Suite, with a strong foundation in Linux, TCP/IP networking, cloud technologies, incident triage, and web security testing. Built a real-time Wi-Fi Intrusion Detection System using packet capture, device fingerprinting, automated alerting, audit logging, and threat visualisation. Interested in network security, cloud security, vulnerability assessment, security monitoring, and practical security engineering.

PROJECTS

- Wi-Fi Intrusion Detection System** | *Python, Scapy, Network Security* **2025**
- Engineered a real-time wireless monitoring tool using Python and Scapy to detect unauthorised devices through live packet capture and MAC/IP fingerprinting
 - Built an automated threat detection pipeline that cross-referenced observed devices against a whitelist and generated alerts for policy-violating connections
 - Implemented structured audit logging for device identifiers, timestamps, and connection events
 - Developed an incident reporting dashboard to visualise threat activity and review flagged devices
- OWASP Web Security Testing Platform** | *Python, JavaScript, Flask, Security Testing* **2025 - Present**
- Developing a web security testing platform featuring intentionally vulnerable applications for hands-on penetration testing
 - Implementing SQL Injection, Cross-Site Scripting (XSS), and access control vulnerability modules aligned with OWASP Top 10 concepts
 - Building automated security scanning and reporting capabilities for vulnerability assessment
- Java REST Location Service API** | *Java, REST API, OSRM, JSON* **2026**
- Designed and developed a RESTful API to calculate distance and travel time between GPS coordinates
 - Integrated OSRM routing with structured JSON responses
 - Implemented input validation, security controls, logging, and fault-tolerant error handling
- Distributed Load Balancer System** | *Java, Distributed Systems, Networking* **2024**
- Engineered a fault-tolerant distributed load balancer using the Round-Robin algorithm
 - Developed a client-worker architecture with automatic failover and worker health checks

EDUCATION

- Nottingham Trent University, UK - BSc (Hons) Cyber Security, First Class Honours (Sep 2023 - July 2026)
- Jaffna Hindu College, Sri Lanka - Engineering Technology (Apr 2019 - Aug 2021)

TECHNICAL SKILLS

Security: Wireshark, Nmap, Burp Suite, Log Analysis, Vulnerability Management, Security Monitoring
Networking: TCP/IP, Routing, VLAN, Cisco Packet Tracer, Network Analysis
Programming: Python, Java, SQL, JavaScript, HTML, CSS
Systems & Cloud: Linux, Windows Server, Azure, AWS
Development: Git, GitHub, VS Code, Flask, Scapy, REST API Development

EXPERIENCE

Student Mentor - Cybersecurity Programs

Aug. 2024 - May 2025

Nottingham Trent University

Nottingham, UK

- Mentored first-year cybersecurity students across computing, networking, and security modules
- Provided technical guidance on security fundamentals, programming, threat analysis, and security tools
- Supported coursework, laboratory exercises, and practical cybersecurity activities

Field Reporter

Apr. 2022 - Aug. 2023

Tamil CNN

Part-time

- Conducted field research, interviews, data collection, and incident documentation for investigative reports
- Worked with editorial and production teams to deliver time-sensitive reports under strict deadlines

VIRTUAL EXPERIENCE & JOB SIMULATIONS

Deloitte Australia Cybersecurity Job Simulation

Feb. 2026

Forage

- Analysed web activity logs to identify suspicious user behaviour during a simulated cybersecurity breach
- Applied log analysis and incident triage techniques to support a simulated security investigation

Mastercard Cybersecurity Virtual Experience Program

Feb. 2026

Forage

- Identified and reported simulated phishing threats and evaluated security-awareness gaps

Tata Consultancy Services Cybersecurity Job Simulation

Feb. 2026

Forage

- Completed a multi-task cybersecurity simulation covering intermediate security scenarios

CERTIFICATIONS

Information Security Fundamentals

2026

EC-Council

- Training covering CIA triad, threat analysis, risk management, cryptography, access controls, and security policies

Tools of the Trade: Linux and SQL

2026

Google (Coursera)

- Hands-on Linux command-line operations, file systems, user permissions, and system administration

Connect and Protect: Networks and Network Security

2026

Google (Coursera)

- Network architecture, TCP/IP, DNS, HTTP/HTTPS, firewall configurations, and intrusion detection

Introduction to Cybersecurity

2025

Cisco Networking Academy

- Cybersecurity fundamentals, threat types, attack vectors, defensive strategies, and security frameworks
